

FREE-FALL VALVE TILT SWITCH 10900413-NO

Landon Kingsway tilt switches are designed to be used in conjunction with our Free-Fall Valves / drop weight valves, they provide indication of valve position. Typically, they are used on generator feed lines, the valve will isolate the fuel in the event of a fire occurring, when the room reaches a certain temperature, it will melt the fusible link connected to the valve and isolate the fuel. The tilt switch can be mounted to the valve arm to notify the generator to shut down in the event of a fire.

The unit provides normally closed and normally open volt free contacts, they are capable of switching DC voltages.

Dimensions

Enclosure can be rotated 180° if required

INSTALLATION

The tilt switch enclosure should be securely fitted onto the valve lever using the supplied fixings. Care should be taken to ensure that the enclosure does not interfere with the motion of the valve lever. The electrical connections should be made through a cable gland or flexible conduit. Leave enough slack in the cable for the valve lever movement. Electrical installation should only be performed by competent persons in accordance with the connection diagram.

TEST

The fire valve should be operated manually with continuity meter before electrical power is applied through terminals 1,2,3,4,5,6,7,8, this will ensure that the electrical connections are correct.

Technical Specification

Enclosure	Weatherproof grey epoxy coated steel plate. IP65
Fixing Centres	100mm
Electrical Entry	20mm conduit gland for cable diameter 6mm to 12mm
Volt Free Contacts Terminal	(1&2) / (3&4) / (5&6) / (7&8)
Contact resistive load	250mA
Load Voltage (DC)	60vDC
Operating Temperature	-10°C to +50°C
Weight	0.2kg

Tilt switch attached to valve (Cover removed)
